Louisiana Fuel Team and Playbook

The Louisiana Fuel Team was developed under the Jindal administration in an effort to supplement the state's emergency response to the public's need for fuel during times of evacuation and/or other emergencies. The group is comprised of public and private sector volunteers working together to gain greater efficiency in making fuel available prior to, during, and after an emergency such as a hurricane.

The state Department of Natural Resources (DNR) serves as the lead agency to oversee the Fuel Team Playbook, while the Department of Agriculture and Forestry (DAF) serves as the lead state agency for coordination and optimization of the emergency fuel supply.

The Fuel Team Coordinator is the DNR Assistant Secretary of the Office of Coastal Management or another appointed designee. The private sector Fuel Team members include representatives of the refinery and supplier sectors, supply and terminal sector, retail fuel and tank truck carrier sectors.

The Louisiana Fuel Team Playbook supplements the State of Louisiana's Emergency Operations Plan (Reference 1).

To view gasoline and diesel fueling stations in the state, see the [database](#) aimed at providing current information on the availability of fuel from those businesses participating voluntarily in the effort. (Please note the DNR disclaimer statement before viewing.)

INFORMATION POSTERS

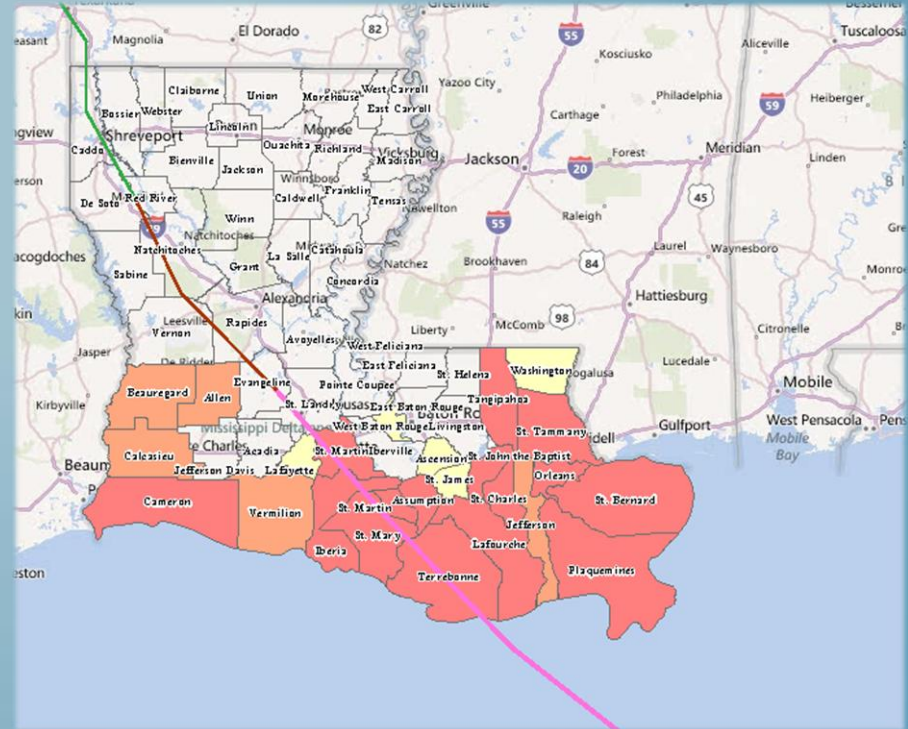

FUEL TEAM STATION DATABASE PUBLIC VIEWER

- Provides visibility of facility status for the public (**RED LIGHT**/**GREEN LIGHT**)
- Designed for multiple tiers to update facility status
 - Facility representatives
 - 764 out of 2855 online surveys have been completed (27%)
 - Online surveys can be entered and maintained at http://sonris-www.dnr.state.la.us/fuel_stations/SurveyLogin.jsp
 - Parish EOCs
 - Public input

FUEL DEMAND MODEL MAPPING

- Track current storm paths
- Monitor and update parish evacuation orders
- Identifies locations of fuel facilities throughout the state
- Prediction tool for estimated traffic flow, fuel demand, and fuel availability along evacuation routes for current storm
- Historical traffic flow, fuel demand, and fuel availability along evacuation routes for previous storms
